ABSTRACTED-PUB-NO: DE 19947669A

BASIC-ABSTRACT:

NOVELTY - Process for determining the quality of fats and oils comprises determining the concentration of heavy volatile hydrocarbons using a first gas sensor from which the criterion for the quality of the fat or oil is derived.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a measuring device for carrying out the process comprising a first gas sensor (G1) for determining the concentration of heavy volatile hydrocarbons and a second gas sensor (G2) for determining the concentration of light volatile hydrocarbons.

USE - For determining the quality of fats and oils.

ADVANTAGE - The device is compact and the measurement can be quickly carried out.

DESCRIPTION OF DRAWING(S) - The drawing shows a cross-section through the measuring device.

first gas sensor G1

second gas sensor G2

moisture sensor H
